

Jaime Lovera

Frontend Engineer & Technical Project Lead

jloveraulecia@gmail.com linkedin.com/in/jaime-lovera github.com/jlovera3 jaime-lovera.pages.dev

PROFILE

Frontend engineer and technical project lead building and shipping web and mobile products, from apps in the App Store and Google Play to enterprise web platforms. Today I lead technical delivery on a large insurance programme: coordinating engineers, managing delivery and contributing to architecture decisions. I care about clean architecture, performance and the details that make a product feel right.

EXPERIENCE

Frontend Developer & Technical Project Lead · knowmad mood Apr 2025 – Present

- Joined as a Frontend Developer and grew into technical project leadership on an enterprise insurance programme.
- Delivered for three very different clients: infrastructure monitoring, port logistics and insurance.
- Moved from mobile apps to large-scale web platforms and enterprise architecture.

Generali · Digital insurance journeys · Regal & Genesis Nov 2025 – Present

- Transformation of the self-service insurance journeys (car, home and more) for Generali's Regal and Genesis brands.
- Since June 2026, technical project lead: planning and delivery across teams and day-to-day coordination of a team of MuleSoft integration developers.
- Contributing to architecture decisions on a large enterprise backend-integration programme.

Nodus · Octopus · Port operations platform Jul 2025 – Nov 2025

- Internal management web platform for port operations in Montevideo: vessel and container reception, payments, invoicing and document generation.
- My first step from mobile into large-scale web applications, built with Angular.
- Full time on it from July 2025 while keeping AppXData going at 50%, and still providing support today alongside my role at Generali.

Ofiteco · AppXData · BridgeData, TunnelData & DamData Apr 2025 – Jun 2025

- Field apps that let operators take sensor readings on bridges, tunnels and dams so maintenance can be planned and infrastructure kept in good condition.
- Upgraded it from an early Angular version to the latest release and migrated it from Cordova to Capacitor.
- Delivered end to end as the only developer: full time from April to June 2025, then at 50% while I started on Octopus. Still providing support today.

Stack: Angular · Capacitor

Frontend Developer · Meinestadt Jan 2023 – Jan 2025

- Developed the app that represents the company's web portal.
- Communicated, improved and applied internal product concepts.
- Owned the deployment of the apps to the stores.

Selected apps: Meinestadt App

- Worked on several apps at once to resolve bugs in production.
- Led a team of 4, managing and organising the tasks of 3 projects while covering a paternity leave.
- Developed and improved apps for external customers, raising product quality and effectiveness.

Selected apps: Reciclos, Tarjeta Social Digital, ColeChef, ColeChef Pro, Calidad del Aire, Digitalízate Plus, Roble

- Web, Android and iOS development with Ionic, Angular and Cordova, plus a Laravel back end.
- Delivered “Museums of Málaga”, “Our Lady of La Leche” and “Galeón Juncal” exhibition apps.
- Virtual and augmented reality experiences on Android devices.
- Git-based workflow in an Agile / Scrum team.

Stack: Ionic · Angular · Cordova · Laravel · AR / VR

Selected apps: Museos de Málaga, Universidad de Málaga, Our Lady of La Leche, Exposición Galeón Juncal

- Built the web, Android and iOS apps for PTV Telecom’s technical service from scratch.
- Ionic, Angular, TypeScript and PHP drivers, versioned on GitHub.
- Published to the App Store and Google Play.
- Integrated native Google Maps, SMS sending and card payments.

Stack: Ionic · Angular · TypeScript · PHP

Selected apps: PTV SAT, Mi PTV
